

SWEN90016

Software Processes & Project Management

Harry Drakos

Department of Computing and Information Systems

The University of Melbourne

harry.drakos@unimelb.edu.au

2020 – Semester 1

Lecture 2

Lecture 2 – Intended Learning Objectives

Module 6 - SDLC - Agile:

1. Understand what Agile is and its origins.
2. Understand the Agile framework.
3. Understand Scrum – Roles, Ceremonies and Artefacts.
4. Understand advantages / disadvantages of Agile.

Module 6.1 – SDLCs

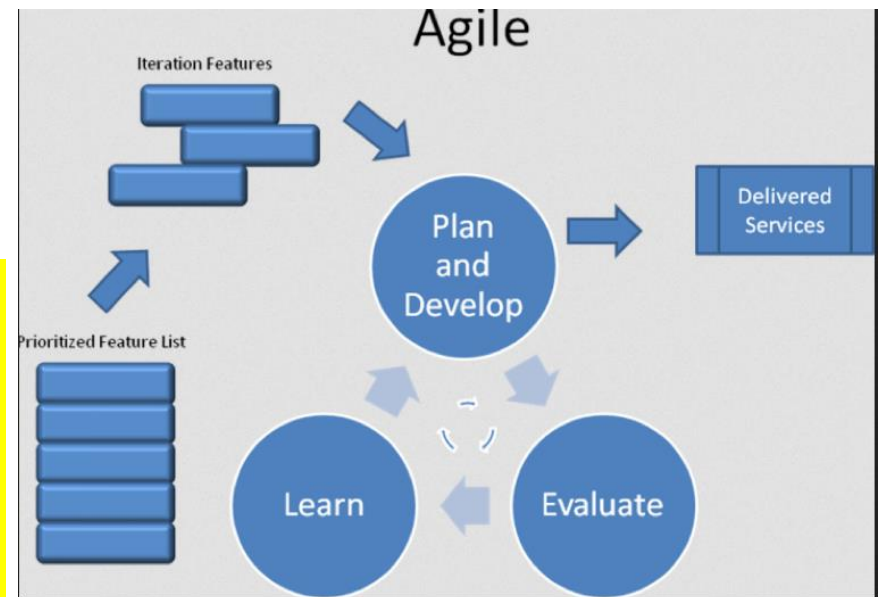

There are many SDLCs around with organisations typically favouring a blend of Formal and Agile approaches.

1. Formal Processes

- Waterfall
- Incremental
- V-Model

2. Agile Processes

- Kanban
- Scrum
- Extreme Programming

Module 6.1 – Why is Agile attractive

- We are in an ever changing global world with the pace of change increasing
- Customer needs and demands are exponentially increasing – products must continually be delivered
- Low Technology cost, ease of use and the global market place has increased competition and reduced entry barriers
- The war for talent is over – and we have lost! Cross functional teams help minimise the potential loss
- Long development cycles are like long lunches – a thing of the past
- Quality is no longer something we do / check later – it must be part of everything we do
- Cross functional groups are more fun!

Module 6.1 – What is Agile

- A set of methodologies based on iterative development where requirements and solutions evolve through collaboration between self-organising cross-functional teams
- A disciplined process that encourages frequent inspection and adaptation
- A leadership philosophy that encourages teamwork, self-organisation and accountability
- A set of engineering best practices intended to allow for rapid delivery of high-quality software
- A business approach that aligns development with customer needs and company goals

Module 6.1 – What is Agile

- In software development, we think about methodologies, activities, interactions, results, work products, artefacts and processes to organise the work.

The main tasks of software development remain the same regardless of methodology used, however with Agile, the flow of activities, how they are undertaken and who is involved is extremely different.

Module 6.1 – What is Agile - Origins

- Changes initiated in large US corporates in 1990's
- Software engineers frustrated with
 - long lead times before products were delivered
 - Decisions made early in the project couldn't be changed later
- 17 software engineer thought leaders met first in 2000 to discuss software engineering and different approaches
- Famous meeting in 2001 at the Snowbird ski lodge in Utah where they met to change the way the industry designed, engineered and deployed software
- Brought together by the Agile Manifesto

<https://techbeacon.com/agility-beyond-history%E2%80%94legacy%E2%80%94agile-development>

Lecture 2 – Intended Learning Objectives

Module 6 - SDLC - Agile:

- ~~1. Understand what Agile is and its origins.~~
2. Understand the Agile framework.
3. Understand Scrum – Roles, Ceremonies and Artefacts.
4. Understand advantages / disadvantages of Agile.

Module 6.2 – Agile Framework

Primary elements of the Agile framework include:

- Manifesto
- 12 Key Principles
- Kanban
- Scrum

Module 6.2 – Agile Framework - *Manifesto*

Agile Manifesto

We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value:

Individuals and interactions	over	processes and tools
Working software	over	comprehensive documentation
Customer collaboration	over	contract negotiation
Responding to change	over	following a plan

That is, while there is value in the items on the *right*, we value the items on the *left* more.

<http://www.agilealliance.org>

Module 6.2 – Agile Framework – *12 Key Principles*

1. Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.
2. Welcome changing requirements, even late in development. Agile harness change for the customer's competitive advantage.
3. Deliver working software frequently, from a couple of weeks to a couple of months, shorter timeframes is the preference.
4. Business people and developers must work together daily throughout the project.
5. Build projects around motivated individuals. Give them the environment and support they need and trust them.
6. The most efficient and effective method of conveying information to and within a development team is face-to-face
7. Working software is the primary measure of progress.
8. Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.
9. Continuous attention to technical excellence and good design enhances agility.
10. Simplicity - the art of maximizing the amount of work not done - is essential.
11. The best architectures, requirements, and designs emerge from self-organising teams.
12. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

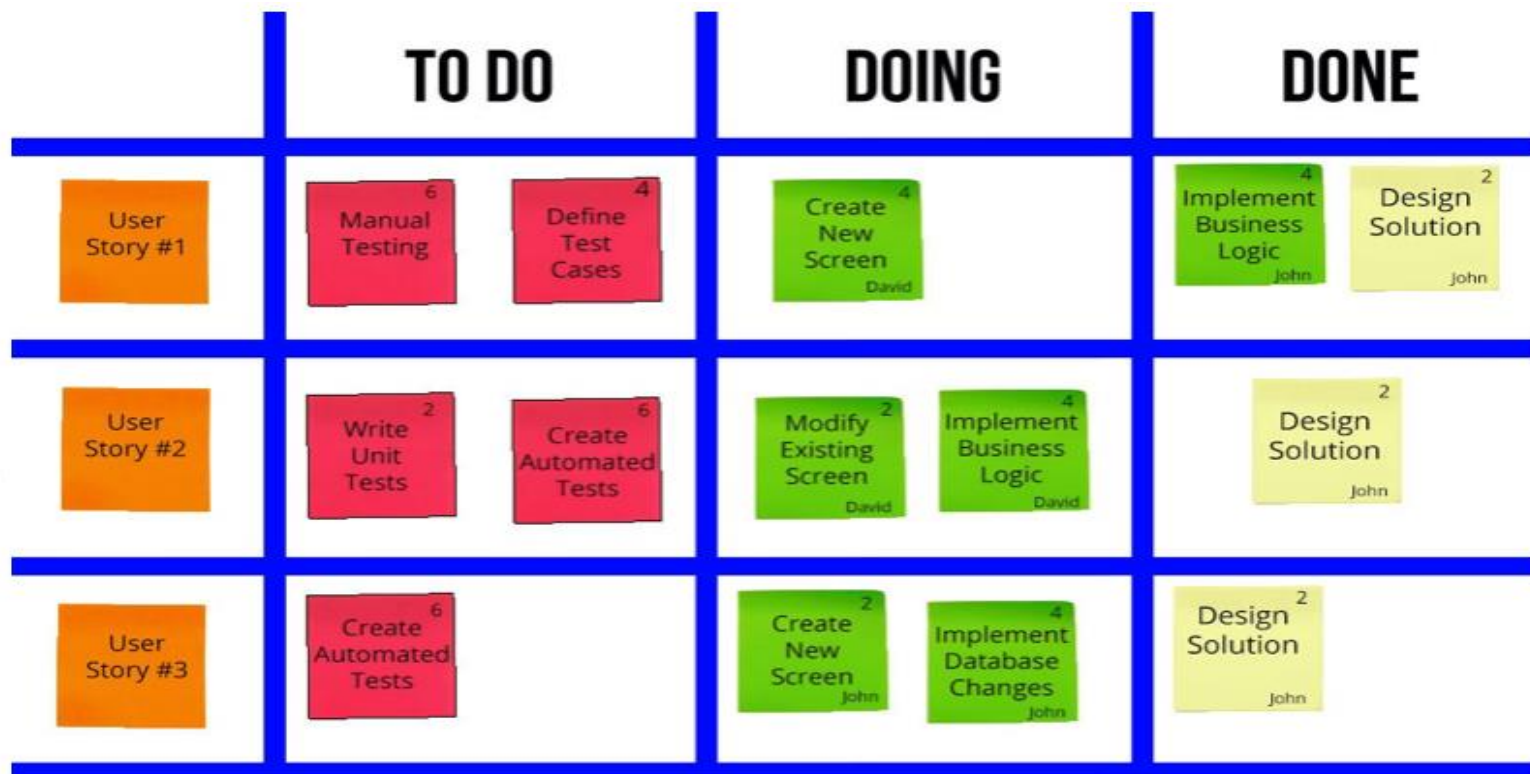

Module 6.2 – Agile Framework - *Kanban*

- **Signboard / Billboard:** Work items are visualised to provide participants a view of progress and process, from start to finish usually via a Kanban board

Module 6.2 – Agile Framework - *Kanban*

Visual progress gives transparency/accountability for self-organizing teams often referred to as **SWIMLANE** boards

Module 6.2 – Agile Framework - *Scrum*

Scrum is an agile way to manage a project

“The... ‘relay race’ approach to product development...may conflict with the goals of maximum speed and flexibility. Instead a holistic or ‘rugby’ approach—where a team tries to go the distance as a unit, passing the ball back and forth—may better serve today’s competitive requirements.”

Hiroataka Takeuchi and Ikujiro Nonaka, “The New New Product Development Game”, *Harvard Business Review*, January 1986.

BREAK

Please return promptly as the
Lecture will re-start in **5 mins**

What is Agile?

A set of methodologies based on iterative development where requirements and solutions evolve through collaboration between self-organising cross-functional teams

A software development methodology that does not require any structure or documentation

An approach that enables developers and projects to self-select and deliver what they feel is the best solution for the customer

The way you describe the flexibility of the development / project team working on specific activities

What is a Scrum in the Agile world

Something the team does on the weekend when they play rugby **A**

Aa set of practices used in agile project management that emphasise daily communication **B**

Something that developers used to build a website **C**

A sequential process to deliver an outcome similar to a relay race **D**

Lecture 2 – Intended Learning Objectives

Module 6 - SDLC - Agile:

- ~~1. Understand what Agile is and its origins.~~
- ~~2. Understand the Agile framework.~~
3. Understand Scrum – Roles, Ceremonies and Artefacts.
4. Understand advantages / disadvantages of Agile.

Module 6.3 – Scrum

Scrum in 100 words

- Scrum is an agile process that allows us to focus on delivering the highest business value in the shortest time.
- It allows us to rapidly and repeatedly inspect actual working software (every two to four weeks).
- The business sets the priorities. Teams self-organise to determine the best way to deliver the highest priority features.
- Every two to four weeks, you can see real working software and decide to release it as is or continue to enhance it for another sprint.

Module 6.3 – Scrum is used by many organisations

- Microsoft
- Yahoo
- Google
- Electronic Arts
- High Moon Studios
- Lockheed Martin
- Philips
- Siemens
- Nokia
- Capital One
- BBC
- Intuit
- Intuit
- Nielsen Media
- First American Real Estate
- BMC Software
- Ipswitch
- John Deere
- Lexis Nexis
- Sabre
- Salesforce.com
- Time Warner
- Turner Broadcasting
- Oce

Module 6.3 – Scrum is used for all types of projects

- Commercial software
- In-house development
- Contract development
- Fixed-price projects
- Financial applications
- ISO 9001-certified applications
- Embedded systems
- 24x7 systems with 99.999% uptime requirements
- the Joint Strike Fighter
- Video game development
- FDA-approved, life-critical systems
- Satellite-control software
- Websites
- Handheld software
- Mobile phones
- Network switching applications
- ISV applications
- Some of the largest applications in use

Module 6.3 – Scrum Key Characteristics

- Self-organising teams
- Product progresses in a series of focused sprints
- Requirements are captured as items in a list of product backlog
- Scrum is one of the agile processes – the one most widely used, discussed and debated
- Time frame is contained to a manageable size (weeks or months)

Module 6.3 – Scrum Framework - *Sprints*

Requirements

Design

Code

Test

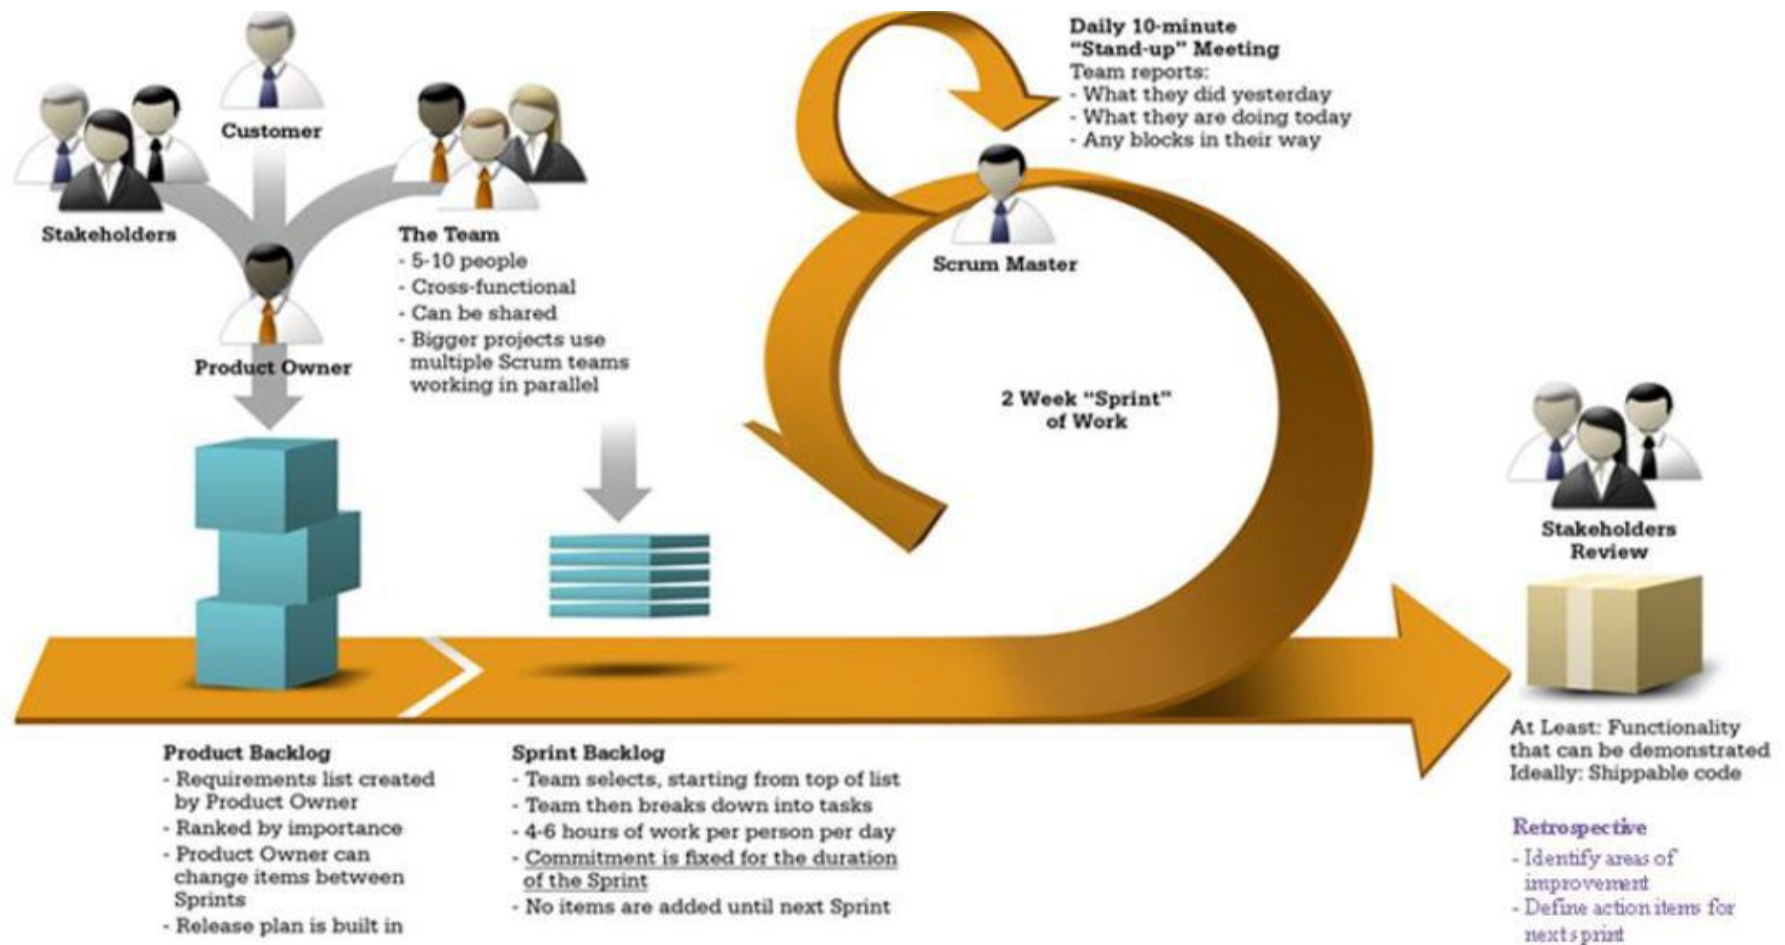

Rather than doing one thing at a time...

...Scrum teams do a little of everything all the time

Source: "The New New Product Development Game" by Takeuchi and Nonaka. *Harvard Business Review*, January 1986.

Module 6.3 – Scrum Framework

Module 6.3 – Scrum Framework

Roles

- Product owner
- ScrumMaster
- Team

www.mountaingoatsoftware.com

Ceremonies

- Sprint planning
- Sprint review
- Sprint retrospective
- Daily stand-ups

Artifacts

- Product backlog
- Sprint backlog
- Burndown charts

Module 6.3 – Scrum Roles

Roles

- Product owner
- ScrumMaster
- Team

Ceremonies

- Sprint planning
- Sprint review
- Sprint retrospective
- Daily stand-ups

Artifacts

- Product backlog
- Sprint backlog
- Burndown charts

Module 6.3 – Scrum Roles – *Product Owner*

- Defines the features of the product
- Decides on release date and content
- Is responsible for the Benefits / Profitability of the product (ROI)
- Prioritises features according to market value
- Adjusts features and priority every iteration, as needed
- Accepts or reject work results

Module 6.3 – Scrum Roles – *Scrum Master*

- Represents management to the project
- Responsible for enacting Scrum values and practices
- Removes impediments / road blocks
- Ensures that the team is fully functional and productive
- Enables close cooperation across all roles
- Shields the team from external interferences
- Is a member & active participant of the Scrum Team

Module 6.3 – Scrum Roles – *The Team*

- Typically 6 - 9 people
- Cross-functional:
 - Programmers, testers, user experience designers, business representatives etc.
- Members should be full-time – some exceptions
- Co-located (physically or virtually)

Module 6.3 – Scrum Ceremonies / Meetings

Roles

- Product owner
- ScrumMaster
- Team

Ceremonies

- Sprint planning
- Sprint review
- Sprint retrospective
- Daily stand-ups

Artifacts

- Product backlog
- Sprint backlog
- Burndown charts

Module 6.3 – Scrum Ceremonies / Meetings

Sprint Planning

- Defines how to achieve sprint goal (design)
- Create sprint backlog (User Stories) from product backlog
- Estimate sprint backlog in team velocity and Story Points
- Product Owner priority guides the work
- Release Plan is created
- High-level design is considered

Module 6.3 – Scrum Ceremonies / Meetings

Sprint Planning Meeting

1st Half of the meeting

- Team defines **what** can be done in this sprint
- Starts by writing down the Sprint goal
- Identify the items from the backlog that can achieve this

2nd Half of the meeting

- Team figures out **how** the work will get done
- Break down each item in the sprint backlog into tasks to capture all the work required
- The tasks form the basis of the sprint plan that is used to track, cost and manage progress

Source: Head First Agile – A Brain-Friendly Guide to Agile Principles, Ideas, and Real-World Practices By [Andrew Stellman](#), [Jennifer Greene](#)

Module 6.3 – Scrum Ceremonies / Meetings

Daily Stand-up

- Parameters
 - Daily
 - 15-minutes and no more than 30 mins
 - Stand-up
- Not for problem solving / Not a status meeting
 - Whole world is invited
 - Only team members, ScrumMaster, product owner, can talk
- Helps avoid other unnecessary meetings
- 3 key questions asked:
 1. What did I do yesterday.
 2. What will I do today.
 3. What is in my way to get my work completed.

Module 6.3 – Scrum Ceremonies / Meetings

Sprint Reviews - Showcase

- Team presents what it accomplished during the sprint
- Typically takes the form of a demo of new features or underlying architecture
- Informal
- 2-hour prep time rule
- No slides
- Whole team participates
- Invite the world

Module 6.3 – Scrum Ceremonies / Meetings

Sprint Retrospective

- Periodically look at what is and isn't working
- Typically 30 minutes
- Done after every sprint
- Whole team participates:
 - ScrumMaster and Team
- Possibly Product Owner, customers and others
- Discuss what to:
 - Start Doing, Stop Doing and Continue Doing

Module 6.3 – Scrum Artefacts

Roles

- Product owner
- ScrumMaster
- Team

Ceremonies

- Sprint planning
- Sprint review
- Sprint retrospective
- Daily stand-ups

Artifacts

- Product backlog
- Sprint backlog
- Burndown charts

Module 6.3 – Scrum Artefacts – Product Backlog

User Stories

- A User Story is a requirement expressed from the perspective of an end-user / customer of the system
- User stories shift the focus from writing about requirements to talking about them
- User stories are short, simple descriptions of a feature told from the perspective of the customer who wants the new capability of the system. They follow a simple template:
 - *As a < type of user >, I want < some goal > so that < some reason >*

Module 6.3 – Scrum Artefacts – Product Backlog

User Stories

- User stories are written at varying levels of detail.
- They can cover a large amounts of functionality such as this example from a Professional Membership Website:
 - *As a site visitor, I can get all information associated with my professional membership*
- Because this level of detail is too large for an agile team to complete in one iteration, it is sometimes split into smaller user stories before it is worked on

Module 6.3 – Scrum Artefacts – Product Backlog

Story Points

- Story points are a unit of measure for expressing an estimate of the overall effort that will be required to fully implement a product backlog item or any other piece of work
- Story points help estimate how much work can be done in a sprint
- When estimating with story points, a value is assigned to each item. The raw values are unimportant, what matters are the relative values
- A story that is assigned a 2 should be twice as much as a story that is assigned a 1. It should also be two-thirds that is estimated as a 3 story point.
- Instead of assigning 1, 2 and 3, that team could assign 100, 200 and 300. Or 1 million, 2 million and 3 million. It is the ratios that matter, not the actual numbers

Module 6.3 – Scrum Artefacts – Product Backlog

Product Backlog

User Story 1

User Story 2

User Story 3

User Story 4

User Story 5

User Story nn

- The requirements
- A list of all desired work on the project
- Ideally expressed such that each item has value to the users or customers of the product
- Product Backlog User Stories are selected for a Sprint by Product Owner
- Reprioritised at the start of each sprint

Module 6.3 – Scrum Artefacts – Product Backlog

Example - Professional Body Website

Product Backlog

User Story 1

User Story 2

User Story 3

News Section – Sprint 1

- User Story 1 - As a site visitor, I can read current news on the home page
- User Story 2 - As a site visitor, I can email news items to the editor
- User Story 3 - As a site member, I can subscribe to an RSS feed of news

User Story 4

User Story 5

User Story 6

Courses and Events – Sprint 2

- User Story 4 - As a site visitor, I can see a list of all upcoming “Certification Courses.” I can page through them if there are a lot
- User Story 5 - As a site visitor, I can see a list of all upcoming “Other Courses” (non-certification courses). I can page through them if necessary
- User Story 6 - As a site visitor, I can see a list of all upcoming “Events.” Events are things such as the conferences, free seminars, etc.

www.mountaingoatsoftware.com/agile/scrum/scrum-tools/product-backlog/example

Module 6.3 – Scrum Artefacts – Product Backlog

Example - Professional Body Website

Product Backlog

User Story 1

User Story 2

User Story 3

News Section - Total of 6 Story Points to complete Sprint 1

- User Story 1 - As a site visitor, I can read current news on the home page – 1 Story Points
- User Story 2 - As a site visitor, I can email news items to the editor – 2 Story Points
- User Story 3 - As a site member, I can subscribe to an RSS feed of news – 3 Story Points

User Story 4

User Story 5

User Story 6

Courses and Events - Total of 8 Story Points to complete Sprint 2

- User Story 4 - As a site visitor, I can see a list of all upcoming “Certification Courses.” I can page through them if there are a lot – 2 Story Points
- User Story 5 - As a site visitor, I can see a list of all upcoming “Other Courses” (non-certification courses). I can page through them if necessary – 5 Story Points
- User Story 6 - As a site visitor, I can see a list of all upcoming “Events.” Events are things such as the conferences, free seminars, etc. – 1 Story Points

To complete this total Product Backlog would take 14 Story Points

www.mountaingoatsoftware.com/agile/scrum/scrum-tools/product-backlog/example

Module 6.3 – Scrum Artefacts – Sprint Backlog / User Story

- Scrum team decompose User Stories to Low level User Stories during Sprint Planning
- The User Stories are used for a conversation between the SME and developer. Developer updates the User Stories with the tasks and hours estimates, "Just-In-Time"
- Remaining estimated items are updated daily
- Sprint Backlog is seldom altered
- User stories in the sprint are either completed 100% or not done

Module 6.3 – Scrum Artefacts – Sprint Backlog / User Story

Example - Professional Body Website

Sprint Backlog - News Section – 6 Story Points

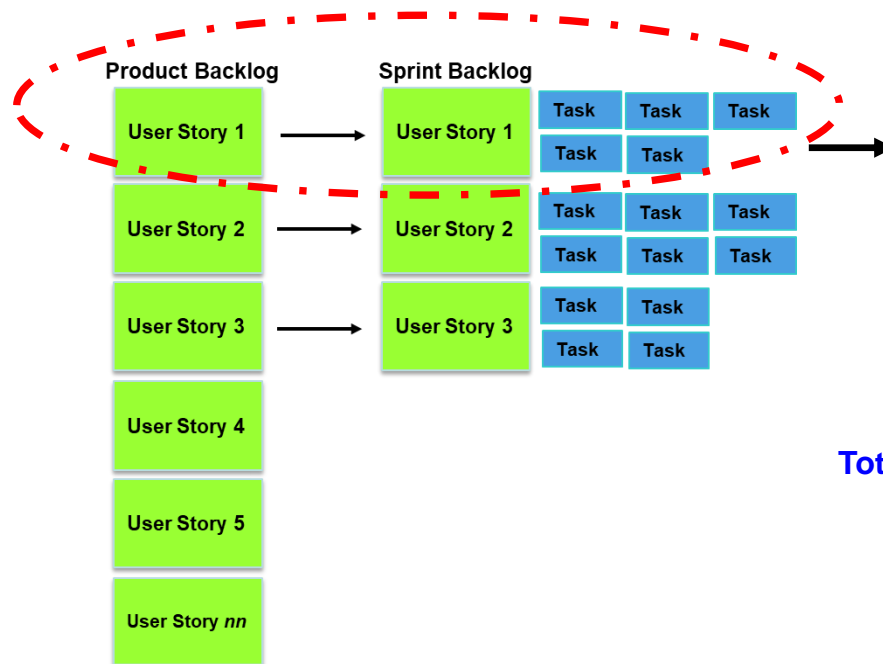

- User Story 1 - As a site visitor, I can read current news on the home page – 1 Story Points
- User Story 2 - As a site visitor, I can email news items to the editor – 2 Story Points
- User Story 3 - As a site member, I can subscribe to an RSS feed of news – 3 Story Points

User Story 1 – 1 Story Point – Task Breakdown

Task	Mon	Tue	Wed	Thu	Fri	Total
Code the user interface	8	4	8	0		20
Code the middle tier	16	12	10	4	0	42
Test the middle tier	8	16	16	11	8	59
Write online help	12	0	0	0	0	12
Write the foo class	8	8	8	8	8	40
Add error logging	0	0	8	4	0	12
Total hours per task	52	40	50	27	16	185

Total # of days for user story # 1 (185 hours / 8 hours per day) 23

Tasks are broken down in hours and managed via a Burn Down chart which allows the team to manage each activity closely

Module 6.3 – Scrum Artefacts – Burn Down Chart

- A burn down chart is a graphical representation of work left to do versus time.
- The outstanding work (or backlog of user stories) is often on the vertical axis, with time along the horizontal.
- It is used to predict when all of the work will be completed.

What are the key characteristics of Scrum?

A process that allows teams to focus on delivering the highest business value in the shortest time

The business sets the priorities. Our teams self-manage to determine the best way to deliver the highest priority features

Continued delivery of working software - every two weeks to a month anyone working

All of the above

Start the presentation to see live content. Still no live content? Install the app or get help at PollEv.com/app

In which Scrum ceremony does the team provide an update and review activities?

Sprint Planning **A**

Sprint
Initialisation **B**

Sprint Review **C**

Daily Stand-ups **D**

Sprint
Retrospective **E**

What is a User Story?

Stories developers tell about
nightmare product owners **A**

A requirement expressed from
the perspective of an end-user
/ customer of the system **B**

All of the above **C**

Start the presentation to see live content. Still no live content? Install the app or get help at [PollEv.com/app](https://pollev.com/app)

What is a burn down chart?

A burn down chart is a graphical representation of work left to do versus time

Something that is used to show how burnt out the team is

Eminem's latest song

Start the presentation to see live content. Still no live content? Install the app or get help at PollEv.com/app

Module 6.3 – Scrum Summary

- Lets have another look at **SCRUM**

<https://www.youtube.com/watch?v=9TycLR0TqFA>

Lecture 2 – Intended Learning Objectives

Module 6 - SDLC - Agile:

1. Understand what Agile is and its origins.
2. Understand the Agile framework.
3. Understand Scrum – Roles, Ceremonies and Artefacts.
4. Understand advantages / disadvantages of Agile.

Module 6.4 – Agile – Advantages & Disadvantages

Advantages

- Customer satisfaction by rapid, continuous delivery of usable software
- People and interactions are emphasised rather than process and tools
- Continuous attention to technical excellence, good design and quality
- Regular adaptation to changing circumstances

Disadvantages

- Difficult to assess the effort required at the beginning
- Can be very demanding (from traditional approaches) on users time
- Harder for new starters to integrate into the team
- Agile is a very different approach – It can be intense for the team
- Requires experienced resources (which are limited in today's market)

Module 6.4 – Formal or Agile which one Should I use???

There is no one right answer. The following questions can assist deciding:

- How Stable Are the Requirements?
- Do the end users need to collaborate?
- Is the Time Line Aggressive or Conservative
- What Is the Size of the Project
- Where Are the Project Teams Located
- What Are the Critical Resources?

Agile Where to find out more information

- www.agilealliance.org
- www.mountangoatsoftware.com/scrum
- www.scrumalliance.org

2020 - Semester 1 Structure

Week #	Lecture Date	Sunderland Theatre Medical Building C216 Thursday 8.15am to 10am	Assignment
1	05/03/20	Subject Introduction Introduction to Projects Projects	Assignment 1 Spec available on LMS Friday 6 th March
2	12/03/20	Project Management Plan SDLC's Agile	
3	19/03/20	Individuals, Motivation and Teams Assignment 1 & 2 open forum / discussion	
4	26/03/20	Project Planning and Scheduling	Assignment 2 available & Groups created during the workshops / tutorials – attendance mandatory
5	02/04/20	Cost Estimation Assignment 1 & 2 open forum / discussion	Assignment 1 (Individual) due Thursday 02/04
6	09/04/20	Stakeholder Management Communication Management	
	16/04/20	Non Teaching Week – Mid semester break	
7	23/04/20	Risk Management	Assignment 2 (Part 1) due Wednesday 22/04
8	30/04/20	Quality Management Configuration Management	
9	07/05/20	Ethics Outsourcing and Procurement	Assignment 2 (Part 2) due Saturday 09/05
10	14/05/20	Configuration Management	Assignment 2 (Part 3) due Saturday 16/05
11	21/05/20	Guest Lecture	Assignment 2 (Final) due Saturday 23/05
12	28/05/20	Subject Revision and Exam Prep	Assignment 2 Project Demonstration during tutorials
